

VIRO engineering

The performance of technology

Our package of services

VIRO engineering offers a customised package of services:

- Engineering at an hourly rate or for a fixed price
- Secondment
- Consultancy
- System integration
- Turn-key systems

We can take care of every stage – from feasibility study, basic detail engineering, realisation, commencement of operations to maintenance – of our clients' projects, which is why we have:

- Broad expertise and in-depth experience in various market segments
- Specialist knowledge in each engineering discipline
- The ability to combine disciplines required for individual projects effectively
- A result-driven and pragmatic approach
- A creative attitude

About our company

With a history going back over 45 years, VIRO engineering currently occupies a strong position as an internationally operating company with seven business locations and over 450 enthusiastic employees. The strength of VIRO engineering lies in the delivery of total solutions using a decisive and integrated approach. Our core business is project management and engineering. We work on simple assignments as well as complex projects that require the smooth cooperation of several engineering disciplines.

Industrial Projects

With our industrial projects, we translate client processes into functional systems. We combine engineering expertise with specialist knowledge of HAZOP, PED, ATEX, SIL, CE, EMC, the Low-voltage Guideline and inspection services. Our projects are for clients operating the (petro)chemical, pharmaceutical, paper and food industries.

Machine Engineering

Our Machine Engineering department carries out a broad spectrum of activities ranging from custom-built machines for the precision engineering industry, assembly and test rigs for fully operational production and packing lines, offshore and shipbuilding. In virtually every market segment, we can offer our clients total solutions for project management, engineering and turn-key systems.

Product Development

Our Product Development department carries out R&D work and projects involving the physical development of existing products for a large number of market segments that include, for example, the automotive, aerospace, amusement parks, consumer electronics, semiconductor and wind energy sectors. We are a strong and reliable partner with in-depth knowledge and years of experience.

Activities

- Project Management
- Process Engineering
- Concept development
- Feasibility studies
- Mechanical engineering
- Electrical engineering and Industrial automation
- Civil and Structural Engineering
- Engineering Analysis/FEM calculations
- Construction Management, Procurement & Commissioning
