

DEKRA

Your partner in innovation

DEKRA SE is one of the world's leading expert organisations. The company currently conducts activities in more than 50 countries. Our staff of around 25,000 employees is committed to ensuring long-term safety, quality and environmental protection. The DEKRA Business Units "Automotive", "Industrial" and "Personnel" provide professional and innovative services in the fields of vehicle inspections, expert appraisals, international claims management, consulting, industrial testing, product testing, certification, environmental protection, qualification, temporary work, as well as out- and new placement. In 2010 DEKRA generated sales totalling around 1.8 billion euros.

As per November 2009 all testing, inspection, auditing and certification activities of the former KEMA Quality have been an integral part of the DEKRA Certification Group. This also applies to all related safety, conformity and certification marks, such as KEMA-KEUR. With the strong position of DEKRA in the Automotive and Industrial sectors, the establishment of a special department for e-automotive was a logical step. Our scope covers the full range of components, from charging stations to the complete vehicle, including all electrical systems, such as charging cables and connectors, electronic converters, batteries and their management systems, electric motors, drive line, vehicle cabling and lighting.

Electric future

Electric cars contain a great deal of power electronics and software. The high currents and high voltages used are associated with the risk of shock, fire and destructive short-circuits. The vehicle and its electronic systems can also pose a threat to users or bystanders. Controlling such risks requires thorough analysis. Meticulous testing is our core expertise..

E-automotive

E-automotive services are performed by our engineers, who have acquired a huge amount of experience in the fields of Professional Electric Products and EMC. Our engineering team plays a prominent role in the testing of electric and electronic products. Our experts sit on international safety committees, making them fully aware of all ins and outs of the new upcoming standards in the field of electrical safety, EMC and automotive.

Innovation

Our team is dedicated to providing custom solutions. This encompasses everything from developing innovative yet practical solutions to the energy-related problems of the future to the development and implementation of cutting-edge quality assurance services for electrical and other high-risk equipment and processes. For more than eighty years, quality, reliability and expertise have been our core values.

Challenge

These three core values are of fundamental significance due to the complexity of the settings in which we operate. The international energy world will soon face its greatest challenges: achieving a sustainable balance between economic interests, securing an affordable energy supply and addressing growing concerns about our environment and climate.
