

Tegema

Develop, Design, Realize, Innovate

To continuously meet market demands, our customers must develop solutions at an ever-increasing speed. The Tegema Group recognises this challenge and offers its customers a helping hand throughout the entire lifecycle, from innovation to sustainability. The Tegema Group is your partner in achieving your technical and business goals. Together with you, we determine the most optimal and, consequently, most responsible solutions. And we do so with a strong focus on quality, safety and responsible choices with regard to people and the environment.

The TEGEMA Group

The Tegema Group is a multidisciplinary project organisation specialising in product and system development, production automation and company mechanisation.

Tegema develops, innovates and implements solutions for its customers in the broad market of High-Tech Systems, Medical Technology, Automotive and Factory Automation. Tegema has a strong track record in product and system development, production automation and mechanisation. The Tegema Group has been a leading partner in the development and implementation of complete solutions for more than 30 years..

High Tech and Medical Systems

Tegema's focus is on project management, mechatronics, precision mechanics and mechanical engineering. Other disciplines - such as electrical engineering, electronics, (embedded) software, optics, physics, chemistry and biochemistry - are Tegema's areas of expertise. Thanks to extensive training and innovation programmes, Tegema guarantees its customers state-of-the-art solutions.

Automotive Systems

From the initial idea or specification phase through the functional model, Tegema takes care of the production means and assembly, as well as tooling and test equipment, from problem definition through creation and commissioning.

Factory Automation

Tegema has acquired a solid reputation as a specialist in the development and creation of Production Automation and Test Equipment. Our knowledge and experience enable us to successfully convert new processes and techniques into machines and tools. We call this 'Production Process Innovation'. Our activities cover everything from feasibility studies, concept development and detail engineering to the creation of machines and tools.

Tegema guides and supports its customers in developing prototypes and setting up serial production. The Tegema Group employs a large number of dedicated CAD and PLM specialists. CAD/PLM support saves you time and money by taking care of the implementation and configuration of the software, including the relevant working methods. This includes the modular set-up of products, reuse of knowledge and parts, shortening of time-to-market and update management. We are primarily oriented towards UGS products, such as NX and Teamcenter, as a PLM system. These products have more than proven their worth worldwide and form a solid foundation for product development and data management.

Want to get the most out of your CAD and/or PLM software and develop clear-cut working methods for all of your employees - without paying a high price? For more information on our activities, see our services page or contact one of our specialists.
